ABSTRACT

The present study is a contribution to solve the problem posed in the community due to the lack of self-management to deal with the problem of the environment and its impact on the health of the neighbors. As theoretical bases of relevance, citizen behavior and environmental protection were consulted. The methodology applied for this study was based on a non-experimental design, based on a descriptive field work with a documentary basis. The population consisted of one thousand four hundred thirty-six (1436) neighbors, leaving the sample represented by thirty (30) neighbors. The technique used was the survey and an Likert scale questionnaire was used as an instrument. The analysis of the results was carried out through descriptive statistics. According to the results obtained, it was evident that in the community there is a need for the implementation of self-management mechanisms to deal with the topic developed; as it is to achieve the significant scope for the good living of citizens with the environment within the community where they live, being possible through the proposal that allows citizen participation in self-management plans to address the environmental problem in the Consejo Comunal "Vecinos Unidos" of Turmero sector the Macaro.

Keywords: Citizen Behavior, Community, Environmental Protection, Community Council.
