The role of the Venezuelan public administration in the promotion of sustainable development

ABSTRACT

Within public or private administration, it is very important to consider the fundamental bases of Sustainable Development to guarantee the socioeconomic well-being and survival of the population in the future. Currently, around the world, environmental matters have been gaining important spaces, from the scientific, academic, social, economic and managerial point of view. Likewise, economic matters, which, given their objectives, influence the management of natural resources and the development of countries. The general objective of this article is to understand the role of public administration in the promotion of Sustainable Development and environmental conservation. To do so, a post-positivist approach or qualitative research is applied, supported by the interpretive method assumed by Kockelmans (2006), based on the analysis of bibliographical content and specialized publications. To address this point, a documentary type of research was carried out, a bibliographical and documentary review via the web. As a result, it was determined that Public Administration as a regulatory entity plays an important role in the promotion of Sustainable Development. Thus, it was concluded that the progress achieved so far has been little compared to the efforts made over many years, which is why greater commitment and effort is required on the part of international and national organizations to minimize the negative impact of human activities on the environment in order to avoid the risk to natural capital and the future of the population worldwide.

Descriptors: Development, sustainability, environment, society, economy, management.

Biographical Review: Bachelor of Regional Planning. Magister in Administrative Management. Doctor in Administrative Sciences. Professor of Planning in the Area of Economic and Social Sciences at the Rómulo Gallegos National Experimental University.
